L4–L5 · LAYERS, SHAPES, AND FALLBACK

Climbing toward the light

Carnegie did not dictate a style. The local communities chose a wide array of different ornmaments and decorations. Beaux Arts to Spanish Colonial, they used many different styles. Despite this, the buildings still shared a particular look. The entrance was raised and reached by a starcase from the street, and a climb meant to suggest a person rising through learning.

Many older libraries began having closed-stack systems. Which meant that books would be retrieved from the stacks by staff. However,, the new Carnegie libraries had ‘free access’ meaning that the public could look at the books on the shelves. The Lawrenceville branch in Pittsburgh was the first library in the world to have a room dedicated to children.

Having light in the rooms was also a needed requirement. At the Carnegie branch of Seattle's Queen Anne neighborhood there were two story windows that filled almost half of all the gable wall. THey would pour daylight into the reading rooms at both ends. Small corbels along the center of the corridor were also carved with "LUX", which is latin for light.
